

Integrate USB-C and Get 9V Out of the USB Host

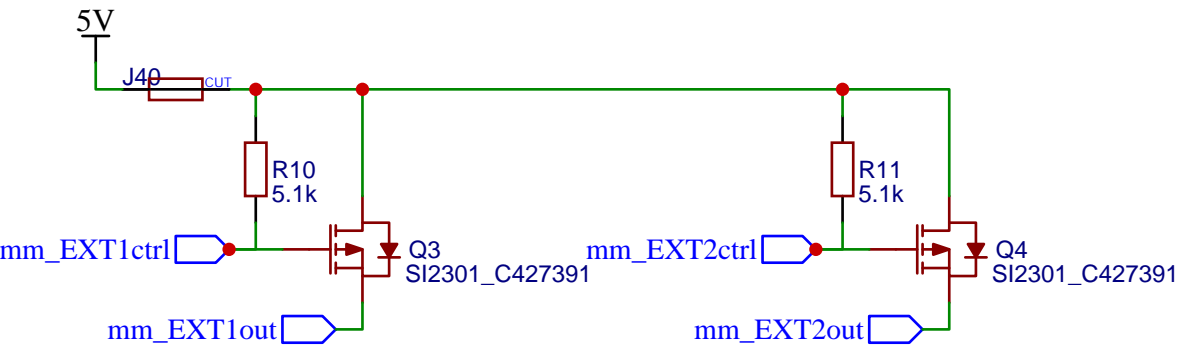

Connector to micro-controller/automarker

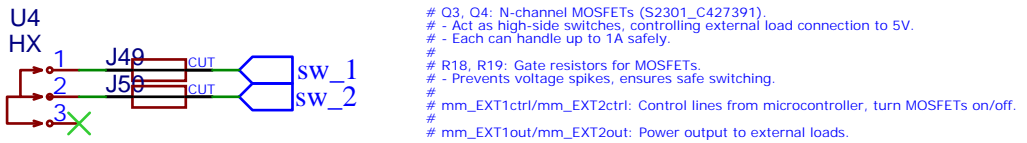

Provide a 3V3 5% accuracy (300mA max) and 5V Out 5% accuracy (1.5A max)

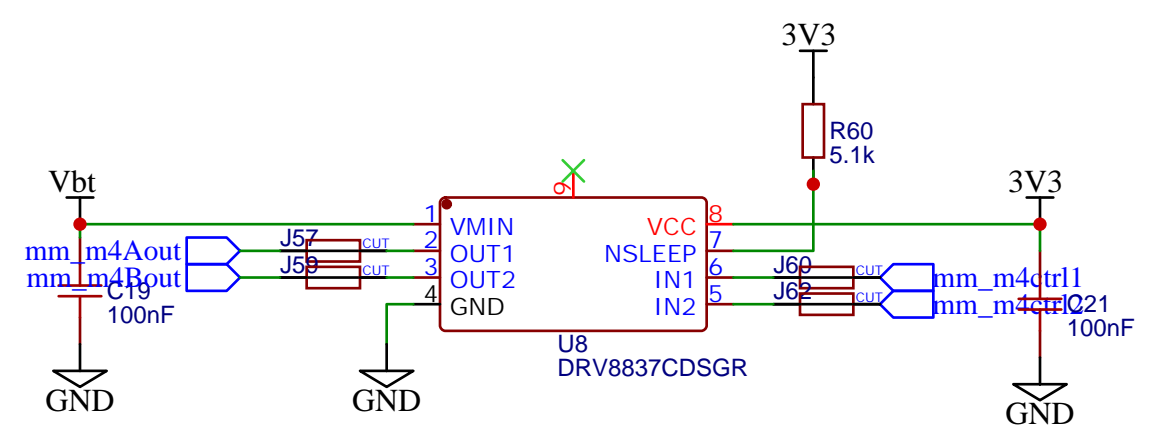

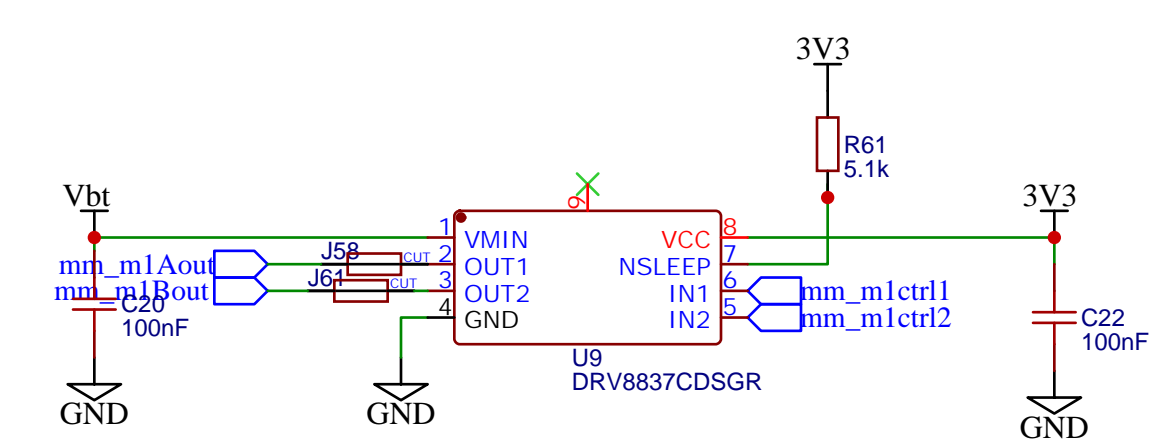

Provide 2x External Load Switching at 1A each (High Side connected to your 5V)

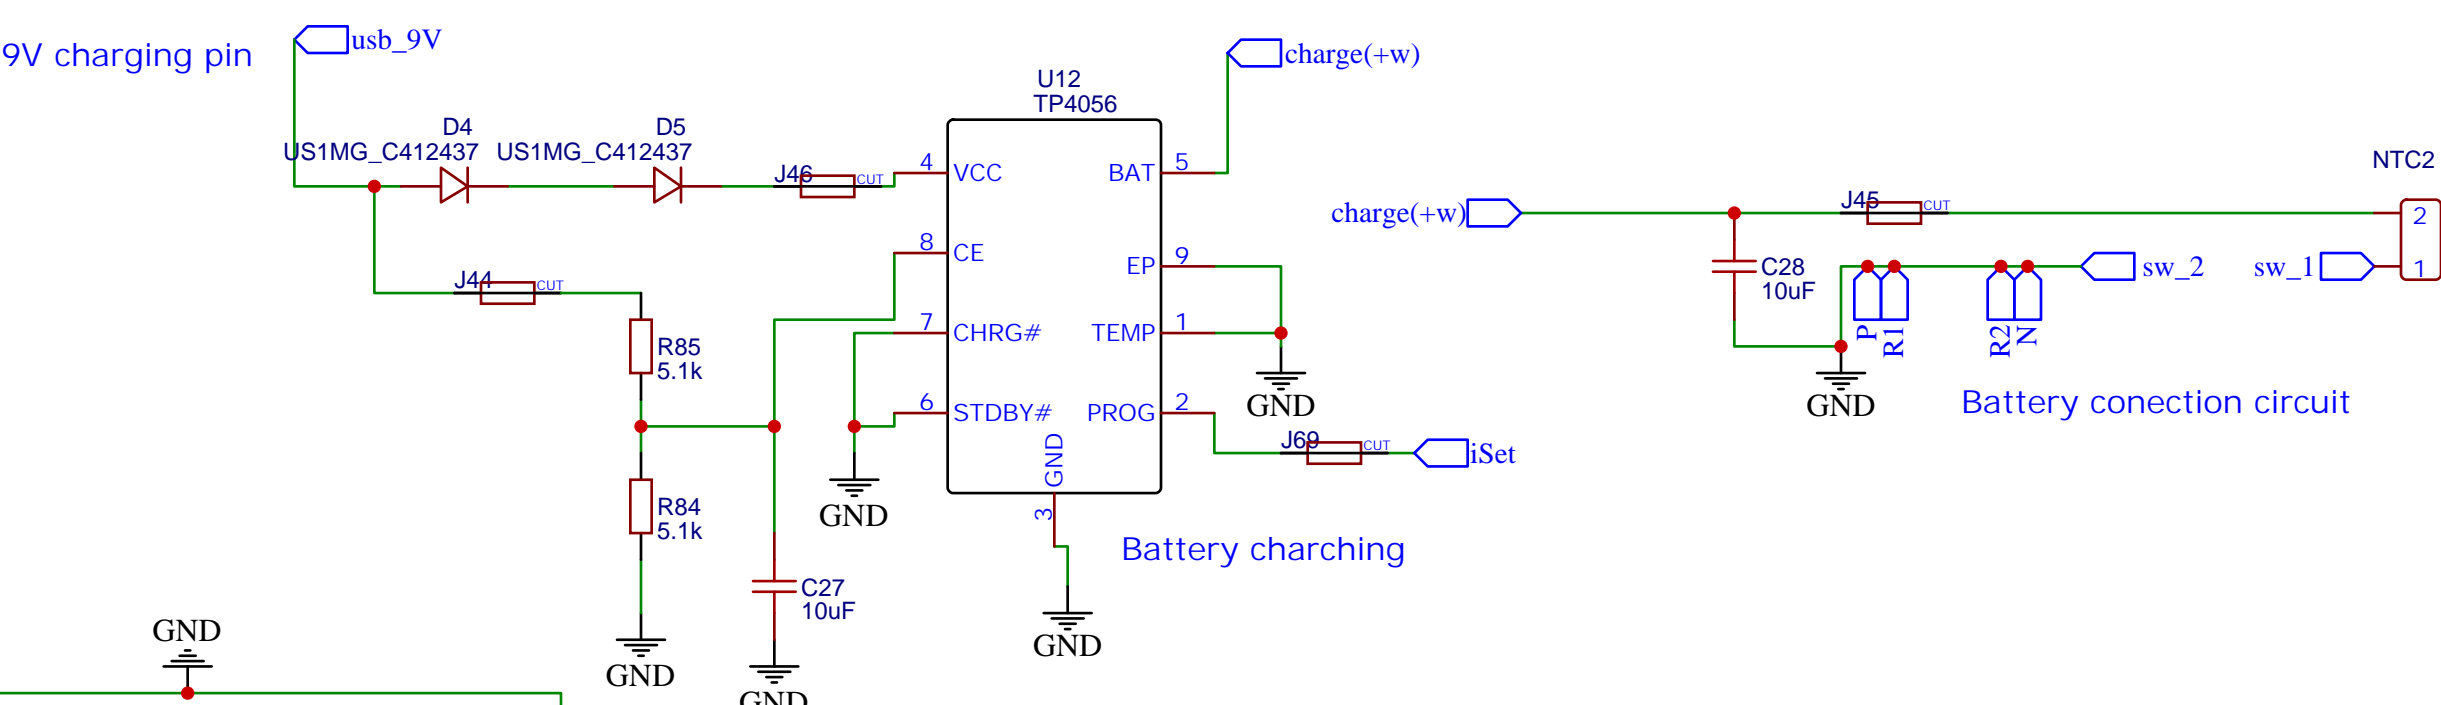

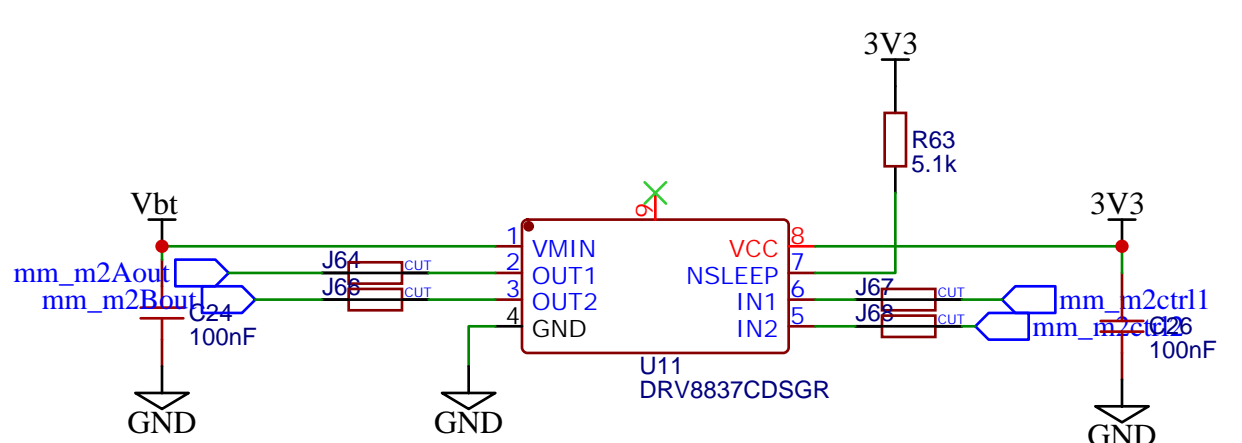

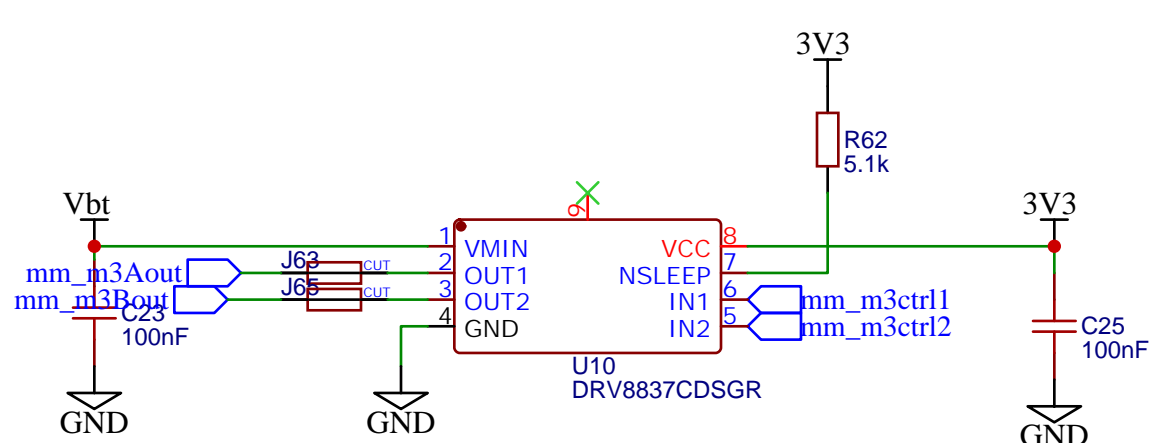

Provide an ON/OFF switch.
OFF state: battery draw <30uA.
ON state: can provide your robot peak current of 2A.
The switch needs to shut down 5V and 3V3.

TITLE: Subtasks 5 to 8 out of 8 for MM project		REV: 3.0
